

## Commentary and analysis

### Market overview

The domestic equity market retreated 5.0% in the first two months of the year as negative sentiment towards China weighed on local resource companies. In March, it rallied 2.9%, but finished the quarter down 2.3% and only up 2.9% for the year. Global equities on the other hand continued with their 2023 performance, rallying 11.8% in Q1 and up 30.8% in the past year.

The defining feature of the first quarter of 2024 was the markets near abandonment of the probability of a US recession. A recession has been a significant worry for market participants over the past 2 years, which has been conspicuous in its absence. As a result, the market has finally come to the realisation that it was overexuberant in its expectation for interest rate cuts, and perhaps the US Fed was indeed right. From having expected six cuts in 2024 totalling 1.5% at the start of the year, the market is now only pricing in two, maybe three cuts in 0.25% increments. Escalating tension in the Middle East, together with Central Bank buying resulted in a noticeable spike in the gold price, up 14.1%. Commodities in general are enjoying a much better year, with the price of oil 19.1% higher at \$91 per barrel, the copper price 10.3% higher and platinum rallying from \$900 per oz to above \$1000 in the last few weeks. SA consumer orientated stocks like Spar (-25.0%), Pick n Pay (-19.7%), MTN (-18.8%) and Woolies (-15.9%) were depressed due to the consumers' ability to spend. MultiChoice (+40.2%) was the exception thanks to the M&A activity from Canal+ which revised its take-out offer higher to R125 per share.

Financials struggled as interest rate cuts got pushed out to later in the year. Specifically, the big four banks fell 7% on average. Property (+3.5%) rallied strongly in January following institutional investor interest but succumbed to interest-rate-induced vertigo in February (-0.3%) and March (-0.6%).

### Portfolio review

The fund started the year well, outperforming its peer benchmark by 3.8% in Q1. This took its 1-year alpha to 7.3% thanks to its higher exposure to global equities. In the past three and 5 years, it has outperformed by 2.0%.

We reviewed the fund's offshore exposure in 2022 and increased it to 30% at a time when peers were reluctant to increase offshore exposure as they thought SA equities were cheap. That decision added a lot of value in 2023 and continued to add value in Q1 as global equities outpaced domestic equities by 14.1%. In addition, the STANLIB Multi-Manager Global Equity Fund we use as a building block outperformed the index by almost 3% in the past year. Despite having low exposure to the 'magnificent seven' it still did well thanks to AI linked businesses like ASML and TSMC. Recent selloff in Tesla and Apple shares also helped as the fund is underweight both companies.

On the domestic front, performance was muted. The stimulus package by the Chinese helped the SA technology sector and as the STANLIB MM SA Equity Fund had an overweight position in Prosus, it benefitted from the rally. Its underweight position in MTN also added value as the company's share price fell, hurt by the devaluation of the Nigerian Naira. The fund also benefitted from the potential corporate action involving Multichoice. On the far end of that, being underweight gold companies hurt and so was holding less than the benchmark in Naspers.

Despite the domestic component struggling, the fund is comfortably ahead of peers.

### Portfolio positioning and outlook

We conducted our annual strategic asset allocation review in Q1 and decided to increase the fund's offshore exposure to 40%. We are peer cognisant and local managers have increased their offshore exposure hence we thought it was the prudent thing to do. Moreover, the opportunity set offshore is much larger when compared to SA and our optimisation work also suggested more offshore exposure. On the domestic component, the fund is underweight resources (gold and platinum companies) and overweight technology and retail companies. Offshore, it is overweight financials and underweight technology.

Local equity strength in March was telling, suggesting there is growing appetite for our more positive view on the asset class. The stronger US growth backdrop helped, as did an improvement in sentiment toward China which is beneficial for commodity prices and local resources. The positivity is however in contrast to the shifting out of interest rate cut expectations, desperately needed in South Africa. While inflation is on the path lower, global dynamics have conspired to entrench the higher for longer theme. We expect further volatility in the coming quarters, but once the first local interest rate cut comes into view, it is reasonable to assume strength in the attractively valued SA sensitive sectors.

## Disclosures

### Information to be considered before investing

Collective Investment Schemes in Securities (CIS) are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending.

The STANLIB Multi-Manager Diversified Equity Fund of Funds is a portfolio of the STANLIB Collective Investment Scheme (the Scheme). The manager of the Scheme is STANLIB Collective Investments (RF) (Pty) Limited (the Manager). The Manager is authorised in terms of the Collective Investment Schemes Control Act, No. 45 of 2002 (CISCA) to administer Collective Investment Schemes (CIS) in Securities. Liberty is a full member of the Association for Savings and Investments of South Africa (ASISA). The Manager is a member of the Liberty Group of Companies. The manager has a right to close a portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate. The Manager does not provide any guarantee either with respect to the capital or the return of a CIS portfolio. A schedule of fees and charges and maximum commissions is available on request from the Manager. The trustee of the Scheme is Standard Chartered Bank.

This portfolio is permitted to invest in foreign securities. Should the portfolio include any foreign securities these could expose the portfolio to any of the following risks: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

This portfolio is a Fund of Funds portfolio. A Fund of Funds portfolio is a portfolio that invests in other portfolios of collective investment schemes, that levy their own charges, which could result in a higher fee structure for the Fund of Funds portfolio.

### Unit price – how it works

Prices are calculated and published on each working day, these prices are available on the Manager's website ([www.stanlib.com](http://www.stanlib.com)) and in South African printed news media. This portfolio is valued at 24h00. Forward pricing is used. Investments and repurchases will receive the price of the same day if received prior to 15h00.

The payment of withdrawals may be delayed in extraordinary circumstances, when the Manager with the consent of the Fund trustees deems this to be in the interest of all Fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the Fund. When the suspension of trading relates to only certain assets held by the Fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued but, will delay liquidity on the affected portion of the Fund. If the Fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force the Manager to sell the underlying investments in a manner that may have a negative impact on remaining investors of the Fund.

### Performance information

All performance returns and ranking figures quoted are shown in ZAR and are based on data sourced from Morningstar or Statpro and are as at 31 March 2024. Annualised return figures are the compound annualised growth rate (CAGR) calculated from the cumulative return for the period being measured. These annualised returns provide an indication of the annual return achieved over the period had an investment been held for the entire period. Actual annual figures are available on request from the Manager. Portfolio performance figures are calculated for the relevant class of the portfolio, for a lump sum investment, on a NAV-NAV basis, with income reinvested on the ex-dividend date. Individual investor performance may differ due to initial fees, actual investment date, date of reinvestment of income and dividend withholding tax. Portfolio performance accounts for all costs that contribute to the calculation of the cost ratios quoted, all returns quoted are after these costs have been accounted for.

### Total Expense Ratio (TER) and Transaction Costs (TC) = Total Investment Charge (TIC) and other fees

The TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER is a measure of the actual expenses incurred by the fund over a one and three-year period (annualised). This includes the TER charged by any underlying fund(s) held as part of this Fund. A high TER does not necessarily imply a poor return nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TER's.

Transaction costs are disclosed separately. Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The sum of the TER and Transaction Costs is shown as the Total Investment Charge (TIC).

Annual management fee: The Fund charges a fixed annual management fee (i.e. fee class) as a percentage of the assets under management, to ensure a simple and understandable fee structure. The Fund invests primarily in segregated mandates but may also invest in other unit trusts i.e. "Underlying Fund Fees", which are included in the Total Expense Ratio (TER). The annual management fee is accrued daily and paid on a monthly basis.

Advice fees: If an investor appoints an adviser, advice fees are contracted directly between the investor and the adviser. The Manager will facilitate the collection of advice fees only upon receiving an investor's instruction to do so. Initial advice fees up to a maximum of 3.45% are collected prior to units being purchased and ongoing advice fees up to a maximum of 1.15% are collected monthly through the redemption of units held by an investor in the Fund. An investor may cancel the instruction to facilitate the payment of advice fees at any time.

### STANLIB Multi-Manager does not provide financial advice

The investments of this portfolio are managed, on behalf of the Manager, by STANLIB Multi-Manager a division of STANLIB Asset Management (Pty) Ltd, an authorised financial services provider (FSP), FSP No. 719, under the Financial Advisory and Intermediary Services Act (FAIS), Act No. 37 of 2002.

This document is not advice, as defined under FAIS. Please be advised that there may be representatives acting under supervision.
