

## Commentary and analysis

### Market overview

Risk assets rallied strongly in the last quarter of 2023 as market participants started pricing aggressive interest rate cuts by central banks in 2024.

Global equities returned 11.1% in USD terms (22.8% for the year) largely driven by developed market equities, specifically the eye watering returns of the Magnificent 7. Global bonds were up 8.1% in USD (+4.4% for the year) as bond yields in many countries fell. In the US, yields on 10-year government bonds fell from 4.6% in Q3 to 3.9% in December. In rand terms, the global returns were 3.0% lower as the rand firmed against the US dollar in Q4.

In the local market, equities also jumped on the bandwagon, up 8.1% in Q4 and 7.9% for the year. The financial sector contributed the most to the returns as it went up 12.2% in Q4 and 20.0% in 2023. Domestic industrial companies struggled a bit but still posted a positive return of 5.9% in Q4 due to a pullback from Naspers, Prosus and BTI. Local resource companies had a difficult quarter, hurt by lower commodity prices. SA property surprised many investors, soaring 15.4% in Q4. The Q4 rally turned the asset class's fortunes, from being down 5.4% in the first 9 months of the year, to finishing up 10.7% for 2023. Local bonds also produced decent returns, up 8.1% in Q4 and 9.7% for the year. The yield on the SA 10-year government bond dropped 100 basis points to 11.4% in Q4 as inflation moderated to 5.5% in November. SA cash returned 2.1% in Q4 (8.0% of the year).

### Portfolio review

The fund outperformed its peers in Q4 and was also comfortably ahead in the past year. Long term performance remains ahead with positive alpha in periods up to 20 years.

The 2023 performance came from the fund's overweight position in global equities. When the regulator gave us allowance to allocate up to 45% offshore in 2022, we took the opportunity to increase exposure to global equities and reduced domestic equities. This was well rewarded last year as global equities soared 30.3% in rands while the domestic market was only up 7.9%.

In addition, owning more local property than peers also helped performance. After many years of poor performance, property bounced back strongly in 2023 and this added to the 2021 rally has really lifted the fund's performance. In the domestic fixed income market, positive instrument selection from the bond building block alongside the beta of 8.1% also added to performance. In all the fixed income building blocks, the selected asset managers had preference for duration as they thought the potential real yields of 6% offered by the long end of the yield curve were not justified given that South Africa has a successful track record of keeping inflation in check within its 3% to 6% target band.

### Portfolio positioning and outlook

Peers increased their offshore exposure last year and are now in line with our allocation. However, they mostly bought global bonds so compared to them, the fund has more global equities. The domestic equity component has high exposure to SA sensitive businesses and technology and offshore, it has more financial exposure than tech. In fixed income, we remain overweight duration. We took some profits from global equities in December but remain overweight when compared to peers. Our TAA view is pro risk and SA assets at the expense of local and global cash.

Looking forward – it is now consensus that the US Federal Reserve is done with its hiking cycle and the next move will be a cut, expected as early as March 2024. In 2024, we will be monitoring closely whether the US Fed can manufacture a "soft-landing" for the US economy or whether it succumbs to a recession which has been so widely predicted by the market. While we feel a soft landing is more probable, we are concerned that with 1.5% in interest rate cuts already priced into the US bond market investors may be disappointed if the Fed's expectation of only 0.75% in cuts comes to fruition. Further afield there remain lingering concerns in the Chinese property market and the resurgence of its crackdown on Technology companies meant that companies like Tencent did not participate in the tech frenzy that led to the birth of 'the magnificent 7' label. Any positive news from the regulators would boost the local technology sector.

Given all the uncertainty, panic selling of companies is noticeable and, in such environments, stock picking opportunities open. We trust the managers in the underlying building blocks to take full advantage of those opportunities.

*All Price, Units and NAV data as at 31 December 2023.*

*Units - amount of participatory interests (units) in issue in relevant class.*

*TER - 1 Year Total Expense Ratio (%) including VAT as at 30/09/2023.*

## Disclosures

### Information to be considered before investing

Collective Investment Schemes in Securities (CIS) are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending.

The STANLIB Multi-Manager Medium Equity Fund of Funds is a portfolio of the STANLIB Collective Investment Scheme (the Scheme). The manager of the Scheme is STANLIB Collective Investments (RF) (Pty) Limited (the Manager). The Manager is authorised in terms of the Collective Investment Schemes Control Act, No. 45 of 2002 (CISCA) to administer Collective Investment Schemes (CIS) in Securities. Liberty is a full member of the Association for Savings and Investments of South Africa (ASISA). The Manager is a member of the Liberty Group of Companies. The manager has a right to close a portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate. The Manager does not provide any guarantee either with respect to the capital or the return of a CIS portfolio. A schedule of fees and charges and maximum commissions is available on request from the Manager. The trustee of the Scheme is Standard Chartered Bank.

This portfolio is permitted to invest in foreign securities. Should the portfolio include any foreign securities these could expose the portfolio to any of the following risks: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

This portfolio is a Fund of Funds portfolio. A Fund of Funds portfolio is a portfolio that invests in other portfolios of collective investment schemes, that levy their own charges, which could result in a higher fee structure for the Fund of Funds portfolio.

### Unit price – how it works

Prices are calculated and published on each working day, these prices are available on the Manager's website ([www.stanlib.com](http://www.stanlib.com)) and in South African printed news media. This portfolio is valued at 24h00. Forward pricing is used. Investments and repurchases will receive the price of the same day if received prior to 15h00.

The payment of withdrawals may be delayed in extraordinary circumstances, when the Manager with the consent of the Fund trustees deems this to be in the interest of all Fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the Fund. When the suspension of trading relates to only certain assets held by the Fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued but, will delay liquidity on the affected portion of the Fund. If the Fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force the Manager to sell the underlying investments in a manner that may have a negative impact on remaining investors of the Fund.

### Performance information

All performance returns and ranking figures quoted are shown in ZAR and are based on data sourced from Morningstar or Statpro and are as at 31 December 2023. Annualised return figures are the compound annualised growth rate (CAGR) calculated from the cumulative return for the period being measured. These annualised returns provide an indication of the annual return achieved over the period had an investment been held for the entire period. Actual annual figures are available on request from the Manager. Portfolio performance figures are calculated for the relevant class of the portfolio, for a lump sum investment, on a NAV-NAV basis, with income reinvested on the ex-dividend date. Individual investor performance may differ due to initial fees, actual investment date, date of reinvestment of income and dividend withholding tax. Portfolio performance accounts for all costs that contribute to the calculation of the cost ratios quoted, all returns quoted are after these costs have been accounted for.

### Total Expense Ratio (TER) and Transaction Costs (TC) = Total Investment Charge (TIC) and other fees

The TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER is a measure of the actual expenses incurred by the fund over a one and three-year period (annualised). This includes the TER charged by any underlying fund(s) held as part of this Fund. A high TER does not necessarily imply a poor return nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TER's.

Transaction costs are disclosed separately. Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The sum of the TER and Transaction Costs is shown as the Total Investment Charge (TIC).

Annual management fee: The Fund charges a fixed annual management fee (i.e. fee class) as a percentage of the assets under management, to ensure a simple and understandable fee structure. The Fund invests primarily in segregated mandates but may also invest in other unit trusts i.e. "Underlying Fund Fees", which are included in the Total Expense Ratio (TER). The annual management fee is accrued daily and paid on a monthly basis.

Advice fees: If an investor appoints an adviser, advice fees are contracted directly between the investor and the adviser. The Manager will facilitate the collection of advice fees only upon receiving an investor's instruction to do so. Initial advice fees up to a maximum of 3.45% are collected prior to units being purchased and ongoing advice fees up to a maximum of 1.15% are collected monthly through the redemption of units held by an investor in the Fund. An investor may cancel the instruction to facilitate the payment of advice fees at any time.

### STANLIB Multi-Manager does not provide financial advice

The investments of this portfolio are managed, on behalf of the Manager, by STANLIB Multi-Manager a division of STANLIB Asset Management (Pty) Ltd, an authorised financial services provider (FSP), FSP No. 719, under the Financial Advisory and Intermediary Services Act (FAIS), Act No. 37 of 2002.

This document is not advice, as defined under FAIS. Please be advised that there may be representatives acting under supervision.
