

## Commentary and analysis

### Market overview

The FTSE/JSE Capped SWIX Index finished the year on a strong note, rallying 8.2% in Q4 as market participants started pricing aggressive interest rate cuts by central banks in 2024. For the year, it was up 7.9%.

The higher for longer sentiment that ensued in Q3 quickly changed in Q4. As early as in November, market participants started pricing lower interest rates and in December, the US Federal Reserve gave these expectations credibility when it left interest rates unchanged in its final meeting of the year, suggesting that it had hit peak interest rates. On the back of this, financials rallied 12.2% in Q4 and were up 20.0% in 2023.

Industrials, after starting the year well (+13.6% in Q1), returned 5.9% in Q4 as Naspers, Prosus and BTI struggled. The technology companies were hurt by the Chinese gaming regulator's decision to announce new rules for gaming companies that are aimed at curtailing gaming use and addiction by players. Tencent share price dropped over 12% on the day, and not surprising, Naspers and Prosus returned 3.7% and 0.7% respectively. BTI lost 6.4% in Q4 (negative 12.0% for the year) after its guidance to impair 25 billion pounds because of its US combustible products.

Resources also struggled in Q4 and for the year. Lower commodity prices driven by the slowdown in China hurt the sector. In Q4, it returned 3.0% and was down 11.8% for the year. Return dispersion within the sector was unusually high. Gold shares were down 3.4% for the quarter on average but up 52.8% for the year compared to platinum shares which were up 18.8% for the quarter but down 36.4% for the year.

### Portfolio review

The fund had a difficult quarter, lagging its FTSE/JSE Capped SWIX benchmark by 2.5% in Q4. The underperformance brought down 1 year alpha to negative 1.7%. In the 3 years ending December, its performance is in line with the benchmark but has remained ahead over the past 5 years.

The asset managers in the fund reduced their exposure to resource companies two years ago and while this was the right decision given the challenges in China, gold companies bucked the trend in Q4 as the gold price rose driven by the conflict in the Middle East and expectations that central banks would start cutting interest rates in 2024. Harmony Gold soared 69.4%, Goldfields was up 35.3% and AngloGold returned 16.0% - all these 3 companies were underweight positions in the fund. The overweight position in BTI also hurt as the US write down in one of its most profitable businesses led to a selloff by investors. Overweight positions in Northam Platinum and Bidvest did well but not enough to change the fortunes of the fund.

All our managers lagged the benchmark in Q4 with Ninety One and Truffle struggling the most. Ninety One had no exposure to Harmony, was underweight Goldfields and had the highest allocation to Naspers and Prosus. It is also the only manager in the fund that is overweight resources. In Truffle's case, it was predominantly its positions in ABSA (negative 6.4%) and Pick n Pay (negative 37.1%) as well as Sasol that hurt the manager. Despite recent performance, these two managers have contributed the most over the past few years. Also worth mentioning is Visio, whose performance has been steadily improving since 2020.

### Portfolio positioning and outlook

The fund remains underweight resources, specifically gold and platinum companies as managers see value in cheap domestic sectors like retailers. Four of the five managers are overweight Technology with preference for Prosus.

Looking forward – it is now consensus that the US Federal Reserve is done with its hiking cycle and the next move will be a cut, expected as early as March 2024. In 2024, we will be monitoring closely whether the US Fed can manufacture a "soft-landing" for the US economy or whether it succumbs to a recession which has been so widely predicted by the market. While we feel a soft landing is more probable, we are concerned that with 1.5% in interest rate cuts already priced into the US bond market investors may be disappointed if the Fed's expectation of only 0.75% in cuts comes to fruition. Further afield there remain lingering concerns in the Chinese property market and the resurgence of its crackdown on Technology companies meant that companies like Tencent did not participate in the tech frenzy that led to the birth of 'the magnificent 7' label. Any positive news from the regulators would boost the local technology sector.

Given all the uncertainty, panic selling of companies is noticeable in the local bourse and, in such environments, stock picking opportunities open. We trust the managers in the fund to take full advantage of those opportunities.

*All Price, Units and NAV data as at 31 December 2023.*

*Units - amount of participatory interests (units) in issue in relevant class.*

*TER - 1 Year Total Expense Ratio (%) including VAT as at 30/09/2023.*

## Disclosures

### Information to be considered before investing

Collective Investment Schemes in Securities (CIS) are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending.

The STANLIB Multi-Manager SA Equity Fund is a portfolio of the STANLIB Collective Investment Scheme (the Scheme). The manager of the Scheme is STANLIB Collective Investments (RF) (Pty) Limited (the Manager). The Manager is authorised in terms of the Collective Investment Schemes Control Act, No. 45 of 2002 (CISCA) to administer Collective Investment Schemes (CIS) in Securities. Liberty is a full member of the Association for Savings and Investments of South Africa (ASISA). The Manager is a member of the Liberty Group of Companies. The manager has a right to close a portfolio to new investors in order to manage the portfolio more efficiently in accordance with its mandate. The Manager does not provide any guarantee either with respect to the capital or the return of a CIS portfolio. A schedule of fees and charges and maximum commissions is available on request from the Manager. The trustee of the Scheme is Standard Chartered Bank.

This portfolio is permitted to invest in foreign securities. Should the portfolio include any foreign securities these could expose the portfolio to any of the following risks: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

### Unit price – how it works

Prices are calculated and published on each working day, these prices are available on the Manager's website ([www.stanlib.com](http://www.stanlib.com)) and in South African printed news media. This portfolio is valued at 15h00. Forward pricing is used. Investments and repurchases will receive the price of the same day if received prior to 15h00.

The payment of withdrawals may be delayed in extraordinary circumstances, when the Manager with the consent of the Fund trustees deems this to be in the interest of all Fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the Fund. When the suspension of trading relates to only certain assets held by the Fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued but, will delay liquidity on the affected portion of the Fund. If the Fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force the Manager to sell the underlying investments in a manner that may have a negative impact on remaining investors of the Fund.

### Performance information

All performance returns and ranking figures quoted are shown in ZAR and are based on data sourced from Morningstar or Statpro and are as at 31 December 2023. Annualised return figures are the compound annualised growth rate (CAGR) calculated from the cumulative return for the period being measured. These annualised returns provide an indication of the annual return achieved over the period had an investment been held for the entire period. Actual annual figures are available on request from the Manager. Portfolio performance figures are calculated for the relevant class of the portfolio, for a lump sum investment, on a NAV-NAV basis, with income reinvested on the ex-dividend date. Individual investor performance may differ due to initial fees, actual investment date, date of reinvestment of income and dividend withholding tax. Portfolio performance accounts for all costs that contribute to the calculation of the cost ratios quoted, all returns quoted are after these costs have been accounted for.

### Total Expense Ratio (TER) and Transaction Costs (TC) = Total Investment Charge (TIC) and other fees

The TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER is a measure of the actual expenses incurred by the fund over a one and three-year period (annualised). This includes the TER charged by any underlying fund(s) held as part of this Fund. A high TER does not necessarily imply a poor return nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TER's.

Transaction costs are disclosed separately. Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The sum of the TER and Transaction Costs is shown as the Total Investment Charge (TIC).

Annual management fee: The Fund charges a fixed annual management fee (i.e. fee class) as a percentage of the assets under management, to ensure a simple and understandable fee structure. The Fund invests primarily in segregated mandates but may also invest in other unit trusts i.e. "Underlying Fund Fees", which are included in the Total Expense Ratio (TER). The annual management fee is accrued daily and paid on a monthly basis.

Advice fees: If an investor appoints an adviser, advice fees are contracted directly between the investor and the adviser. The Manager will facilitate the collection of advice fees only upon receiving an investors instruction to do so. Initial advice fees up to a maximum of 3.45% are collected prior to units being purchased and ongoing advice fees up to a maximum of 1.15% are collected monthly through the redemption of units held by an investor in the Fund. An investor may cancel the instruction to facilitate the payment of advice fees at any time.

### STANLIB Multi-Manager does not provide financial advice

The investments of this portfolio are managed, on behalf of the Manager, by STANLIB Multi-Manager a division of STANLIB Asset Management (Pty) Ltd, an authorised financial services provider (FSP), FSP No. 719, under the Financial Advisory and Intermediary Services Act (FAIS), Act No. 37 of 2002.

This document is not advice, as defined under FAIS. Please be advised that there may be representatives acting under supervision.
